# Quality Matters

**At Towelrads we are passionate about creating both beautiful and practical towel rails and designer radiators, that enhance any room within your home.**

All our radiators are manufactured and tested to the European Standard EN 442.

This means that all heat outputs have been independently verified, ensuring that the radiator of your choice performs as expected.

There are many different diameters of tubes used across the industry but at Towelrads we use 25mm tubes on our standard towel rails to ensure maximum heat output. See the Pisa range on Page 9 and the Hamilton range on page 23 for more information.

## Guarantee

Our guarantee is valid providing proper installation of our product has taken place and has been fitted by a qualified installer. Any damage to a radiator that is caused by the following factors invalidates the guarantee:

- ✘ Poor storage prior to installation
- ✘ Incorrect installation/not following installation instructions correctly
- ✘ Radiators placed in incorrect environments i.e. shower cubicles, public toilets, swimming pools

## A bit of information about your towel radiator:

- All of our wet system chrome radiators are tested according to the EN442 European regulatory standards; and our electric radiators are tested according to EN60335-2-43.
- Maximum operating temperature is generally at 110 °C, certain models however may have a slightly reduced temperature range.
- Towel rails and Designer radiators are degreased, coated in a powder coating. They are then polished and bathed in successive layers of chrome to achieve the high quality look and finish of each radiator.

## Caring for your TowelRads.com product:

- Do not clean with abrasive chemicals as this may lead to corrosion and invalidate the warranty.
- Clean with warm water and a little neutral washing up solution, rinsing immediately with clean water and dry with a soft, clean cloth.
- The occasional use of a mild, non-abrasive lime scale remover can be used but MUST be rinsed away immediately with cold water (a diluted white vinegar solution is recommended).

# Our Radiators Explained

## Electric Radiators

These are supplied solution filled and with a single heating element fitted. The heating is controlled via the electric mains rather than through a central heating system. The benefits include the ability to control the heat within a chosen room rather than the whole house.

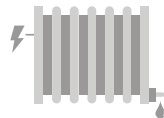

## Central Heating Radiators

Radiators run off the central boiler system using TRV valves to help you control the temperature.

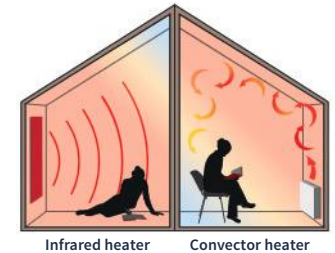

## Dual Fuel Radiators

This solution allows the radiator to be used within the summer months via an electric element when the central heating system is switched off. Benefits include year round warm towels within your bathroom or kitchen.

## Infrared

Our glass radiators use infrared technology to produce comfortable, energy-efficient heat. Radiational convector heaters warm the air, but infrared heat is absorbed by surfaces, objects and people within a room so the heat is retained, keeping the room cosy and dry for longer.

## Ecodesign Compliance

From January 2018, all local space heaters manufactured for sale in the EU must comply with a minimum efficiency standard under Lot 20 of the Energy Efficiency Directive. It is part of the EU's commitment to achieving a 20 per cent energy saving by 2020, driving energy efficiency at all stages of the supply chain, from production to final consumption.

A number of 'product lots' have already been rolled out as part of the 2012 Energy Efficiency Directive (EED), covering everything from televisions to lightbulbs and washing machines. Next is Lot 20, focusing on local space heaters – and when you consider that more than half of energy consumed in our homes is used to heat water and space, it is easy to see the difference it could make.

*See page 89 for more information.*

# Helpful Advice

## How do I know which size radiator will heat my room?

Ensuring you have the correct radiator for your room size is a must. Your installer should be able to confirm the exact requirements or you can visit [www.towelrads.com](http://www.towelrads.com) and use our online heat calculator for total peace of mind.

## Stock

To ensure the best service available Towelrads hold a large proportion of radiators in stock within the UK. Any radiators that require additional lead times are clearly stated in the brochure for your ease.

## Special Finishes

Please note the following price increases for special finishes:

- RAL colours +30%
- Special Colours Noir +35%
- Special Colours Classic + 45%

## How do I order my Towelrads radiator?

- 1** Confirm your heat output requirement via your installer or the Towelrads online heat calculator.
- 2** Choose your design and colour. At Towelrads we have an extensive range of beautiful and functional radiators that are suitable for both modern and traditional style rooms, as well as an extensive range of colours, sizes and outputs.
- 3** Match your heat output to the correct size of radiator. All heat outputs are available by radiator within this brochure.
- 4** Complete the look by choosing your co-ordinated valves and accessories. See page 106 for more information on Towelrads Valves and Elements.
- 5** Order your radiator at Towelrads via Telephone on **01628 625367** or email **orders@towelrads.com**

## Delivery

The majority of Towelrads radiators are available on 1 - 2 days delivery. Within this brochure you will find delivery information for each radiator.

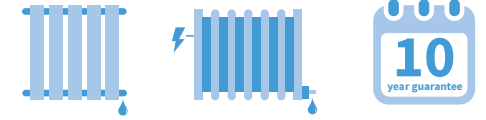

# The Ladder Rail Collection

# The Pisa Range

The Pisa range has 25mm bars because a towel rail bar diameter is directly linked to heat output so the larger the bar, the higher the holding capacity of the towel rail resulting in greater heat output.

Available in both straight and curved designs, the Pisa radiators will compliment any bathroom.

# The Glass Radiator Collection

# Glass Radiators

## Towelrads are proud to introduce Vetro, their new range of glass radiators.

Combining elegant frameless design with innovative technology, the Vetro radiator is a must have for any room in your home.

Our glass radiators produce energy-efficient heat through the use of Infrared technology, reaching set temperatures within 5 minutes.

Compared to convector heaters which warm the air, infrared heat is absorbed by surfaces, objects and people allowing the heat to be retained within the room as well as keeping dust and bacteria to a minimum.

Each radiator is made from shatterproof 10mm laminated toughened safety glass (UN12600-IB1) which provides complete peace of mind.

Each radiator comes complete with a fitting guide and hidden adjustable safety wall brackets\* for discreet, fast and simple installation.

### Vetro Horizontal

Ideal as a direct replacement of an existing panel radiator, the Vetro Horizontal range has been produced in accurate replacement sizes to ensure a fast and simple installation.

Each radiator delivers an equivalent heat output to a single panel compact radiator.

*Please pay close attention to the installation instructions. The bottom two brackets to be left loose to allow for product expansion.*

\*manufactured to German Norm VEDE6035.

### Electric Range

- Touch screen control includes illuminated pre-programmed settings for ease of use.
- Wireless remote control is included for easy 7 day timer programming.
- An antifreeze setting that protects the room from falling below 5 – 7 °C, plus a useful drying function which switches the unit on at a pre-set time of 2 hours.
- Suitable for use within zone 2 makes them perfect for use within bathrooms and wet rooms.
- Infrared heat, which is absorbed by surfaces.

### Wet System

- Our patented glass radiators are 100% environmentally friendly and made entirely from recycled materials.
- Efficient and economical to run through the use of an Aluminium heat exchanger resulting in the ability to adapt quickly to changes in temperature and the reduction of time for heating and cooling.
- Corrosion resistant and tested to twice the average bar pressure used in a standard home.
- High heat output up to 90 °C.
- Incorporates standard plumbing fittings for an easy installation into an existing or new central heating system.

# Vetro Glass Electric

Can be hung vertically or horizontally.

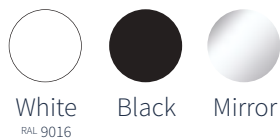

## Features and Benefits

- Remote 24 hour-7 day week timer
- Fixes close to wall
- IPX4 Rated
- Room temperature setting
- Touch screen
- Infrared technology
- Open window function

# The Electric Collection

# The Electric Collection

**As outlined on page 4, in connection with the Directive 2009/125/EC of the European Parliament and of the Council and pursuant to Commission Regulation (EU) 2015/1188, the approach to heating equipment, particularly to the category of “local room heaters”, is changing from January 2018.**

Towelrads declare the following;

- All models of heating elements can be installed in any towel rail, towel dryer and clothes dryer, especially the “ladder” type, suitable for the installation of electric heating elements. The regulation does not cover products, which essentially are not room heaters.
- Room heaters should be equipped with functions that give the user the ability to accurately plan the working time of the device; to adapt the device to external conditions, and other described in the “Eco Directive”.
- The Towelrads Smart Timed series (released in January 2018) elective heating elements, equipped with a room temperature sensor and giving the user control via a suitable application. This range can be installed in room heaters to meet the requirements of the above Directive for this product category.

Other models of heating elements can meet the requirements of the Directive provided they are fitted with appropriate external control programmers (i.e. Our Smart Thermotouch 4.3 controller).

# Elcot

The sleek stainless steel design and minimal size allows bathrooms to enjoy a towel rail in areas where a traditional ladder rail may not fit. The extra low voltage and 12V transformer means they can be installed in wet rooms, shower areas, near bath tubs and wash basins.

## Features and Benefits

- Easy to fit using the mounting kit
- IPX4 Rated
- Stainless steel
- Safe in Zones 2 and 3
- 3 year guarantee

## Elcot Electric, Closed Ended

| Model         | Colour          | Code   | Height mm | Length mm | Output (Watts) | List Price     |

# Understanding the Complimentary Range

## Elements explained

Electric elements are designed to fit inside both plumbed or non plumbed towel rails, this allows the rails to function when the central heating is switched off.

Non Thermostatic elements maintain a constant temperature at which the rail will stay.

Thermostatic elements allow you to control the temperature of the rail to a desired heat.

Timed Thermostatic elements benefit from the addition of a drying function which means that the rail can be turned on for a specific time period as required.

See page 119 for our full range of Towelrads elements.

## Get to know your valves

The type of radiator valve you will need is dependent on the position of the radiator valve inlets that your new radiator requires and the position of the central heating supply flow and return pipes that your radiator feeds off. See the information on the right →

- **Manual Radiator Valves** work like a tap, you can turn the top of the valve to allow more or less water into your radiator.
- **Straight Radiator Valves** join the radiator to the central heating pipework in a straight, horizontal line. The pipe work comes from the floor.
- **Angled and Corner Radiator Valves** allow you to join the central heating pipework to the radiator at an angle. The radiator valve has a 90° bend in it so that the valve inlet can be met in either a horizontal or vertical position. The pipe work comes from the wall.  
The benefit of using Corner valves when pipe work is coming from the wall is that the radiator head will be pointing upwards and will not increase the overall depth of your radiator.
- **Thermostatic Radiator Valves (TRVs)** unlike manual valves can self regulate. This means it takes into account the room temperature ensuring the radiator works at a maximum room temperature.
- **Lockshield Valves** regulates the amount of water flowing out of the radiators into the return pipes which helps to ensure water is evenly distributed across all radiators in your property providing an even heat.

# Smart Elements

## Smart Thermostatic

### Functionality

The heater offers five temperature settings from 30 °C to 65 °C. An electronic temperature sensor ensures precise temperature control. The device displays the temperature to which it is currently set, and indicates the status of the heating cycle.

### Intelligent Home Systems

In the event of a power failure the heating device remembers the most recent settings used, which makes it suitable for connection to external timers or intelligent home systems.

### Safety

The heater has an active safety feature which initiates in the event of dry radiator operation. The heating element is equipped with temperature sensor and thermal fuse (double overheating protection) and offers frost protection (ANTIFREEZE). The heater will display warning indicators in the case of malfunction.

### Design

A heater with a straight cable, without a plug is supplied with a cable masking cover.

To find out more about Smart Elements, including technical drawings, scan the code with your smartphone

## Smart Non-Thermostatic

### Functionality

The heating element maintains a constant temperature of 65C. It has a small, simple controller and IP64 Ingress Protection.

### Intelligent Home Systems

Device is suitable for connection to external timers or intelligent home systems.

### Safety

The heating element is equipped with double overheating protection.

### Design

Controller encased in a small, round casing.

## Lot 20 Ecodesign Compliance

- See page 5 for an overview of Lot 20 Ecodesign Compliance. More detailed information is on page TBC.

# Thermotouch

- Works well with our range of electric rails

| Model                          | Code   | Colour | List Price     |
|--------------------------------|--------|--------|----------------|
| <b>Smart Thermotouch 4.3dC</b> | 128171 | White  | <b>£193.01</b> |
| <b>Smart Thermotouch 4.3dC</b> | 128172 | Black  | <b>£193.01</b> |

All prices are exclusive of VAT. 1-2 day delivery.

- Primary relay: 16 Amps (3600W)
- Additional relay: 5 Amps (1125W)
- Max. combined load: 20 Amps (4500W)
- Voltage: 230V 50/60 Hz
- Compatible sensors: 6.8k, 10k, 12k, 15k, 33k (@25 °C)
- Temperature Range: +5 °C / +35 °C
- Sensor Mode: Floor, Ambient, Floor & Ambient
- Mounting Depth: 31mm
- Dimensions (mm): H88 x W129 x D17

Thermotouch has an additional 5A relay which can control an extra appliance such as an electric heated towel rail. Thermotouch 4.3dC is compatible with the most popular floor sensor probes on the market making it suitable to upgrade your current thermostat and can be adjusted to portrait or landscape modes for flexible installation. The underfloor heating and towel rail controls can be used together or independently.
