CHARACTERISTICS M SERIES REMOTE CONTROL

The whole Rointe range of products are programmable through our bidirectional M Series remote, which allows you to send and receive programmes between all of them. Its wireless infrared connection is designed to create the programming in the M Series control and, once satisfied with it, send it to the apparatuses with the user's confirmation.

REFERENCE: MIC110
MODEL: REMOTE CONTROL M SERIES

M SERIES PROGRAMMING MODES

Creating a programme for a day or a whole week is very easy and intuitive. There are three modes available depending on your needs.

COMFORT MODE

This mode allows you to select temperatures in a range from 20 to 30°C. This is perfect for all times you are at home or in the office.

ECO MODE

Here you will be able to select temperatures from 15 to 19.5°C. These are ideal to choose in times when you need less heat (when in bed, for instance) or for pre-heating the room a little before you are about to arrive.

ANTI-FROST

The temperature here is fixed at 8°C, and this is meant for those times you won't be at home for a long period, to keep the appliance perfectly fit and avoid any freezing problems.
